DOG SHOW setup and information

We are a family run business. Chris, Cheryl and daughter Tanya are committed to providing outstanding customer service and highest quality products to our customers. In our ever-changing technology driven world, Photos-Now photography is presenting state of the art digital photographic methods. Digital processing technology is replacing current photographic methods, especially in the event business. Because we shoot with the camera connected to the computer, the image is immediately shown on a 19" LCD screen facing the owner and judge. You see your photo seconds after it is taken so you can see if the dog is posed properly and that everything is just right.

After we have your photos you can view them on one of three viewing screens which are separate from the main computer so there is no waiting while other photos are imported. After the show, orders are processed, color corrected and sharpened. We print onsite using a production photographic Dye sub printer

OUR SYSTEM

- Professional Nikon digital cameras
- Studio strobe lighting
 - Your photos can be viewed within seconds of being taken on one of our 3 viewing stations
- Two heights of posing tables for different size dogs
- Volume discounts on prints purchased at the show.
- Best JR. handler always gets a free 8X10
